Rufaida PP

DATA ANALYST

rufaida.alavi@gmail.com | 9656286563 | Malappuram | https://github.com/rufaidapp | www.linkedin.com/in/rufaida-dataanalyst

SUMMARY

Aspiring AI-integrated Data Analyst with a strong foundation in Excel, SQL, Python, Power BI. Secured placement on two Kerala PSC rank lists through disciplined, consistent preparation. Eager to apply analytical thinking and AI tools to turn data into clear insights, and ready to start in an entry-level role.

EDUCATION

Bsc Maths and Physics 2020-2023

University of Calicut

Secured an aggregate score of 72% (First Class).

Conducted water quality analysis using polarimetry to evaluate sample properties and purity.

PROJECTS

Logistics Delay Analysis 1

Logistics Analyst | https://github.com/rufaidapp/Logistics-Delay-Analysis-

- Built a 4-page Power BI dashboard with 17 visuals on 1000 logistics records
- using DAX measures and calculated columns. Found that Heavy traffic shipments were delayed 100% of the time against about 35% for Clear or Detour traffic. Traffic is the biggest driver of delay.
- Used a Decomposition Tree so stakeholders can drill from traffic to delay reason to shipment status.
- Tested every chart against the data and removed five that showed no real pattern so the report shows only supported findings.

Food Wastage Analysis 1

Data analyst | https://github.com/rufaidapp/Food-Waste-Analysis

- Cleaned and analyzed 1,782 raw records, working with a cleaned dataset of 1,618 records across 11 original data columns.
- Developed an interactive 3-page Power BI dashboard to explore food waste patterns, analytical insights, and pricing trends.
- Used DAX to calculate food wastage percentage and food served, supporting quantitative analysis of food consumption and waste.
- Analyzed food waste across 5 food categories, 4 event types, and 3 pricing levels to compare waste patterns across different event settings.
- Evaluated 46,321 units of recorded food waste against 666,980 units of food quantity, with an overall wastage ratio of approximately 6.94% in the cleaned dataset.

SKILLS

Analytics, Plot (Graphics), Excel Formulas, Dashboard Creation, Data Storytelling, Professional Networking, Data Wrangling, Exploratory Data Analysis, Data Analysis, Model Evaluation, Dashboard, Data Presentation, Data Visualization, Web Scraping, SQL, Python Programming, Data Visualization Software, Microsoft Excel, IBM Cognos Analytics, Plotly

CERTIFICATIONS

IBM Data analyst Professional Certificate 2023

Coursera | https://www.coursera.org/account/accomplishments/professional-cert/certificate/56GUMT58JV7J

- Technical Proficiency: Developed job-ready skills in data manipulation, database management, and dashboard creation using Python (Pandas, NumPy), SQL, Microsoft Excel, and IBM Cognos Analytics.
- Data Pipelines & Wrangling: Practiced end-to-end data cleaning, web scraping (BeautifulSoup), and data preprocessing to prepare unstructured datasets for analysis.
- Visualisation & Storytelling: Created interactive, data-driven dashboards and reports using Matplotlib, Seaborn, and Cognos to communicate insights to stakeholders.
- Capstone Project: Executed an intensive data analysis project involving data collection, exploratory data analysis (EDA), and statistical modeling to drive business decision-making.

LANGUAGES

English - communication, arabic - write and read, malayalam - proficient
